

# HarvardX Data Science Capstone

*Codrin Kruijne*

*22/05/2019*

This report has been prepared for the [HarvardX Data Science program] ](<https://www.edx.org/professional-certificate/harvardx-data-science>) Capstone course final project submission and consists of three files of original work that can be found on GitHub (with all commits): this report in PDF, this [report in R markdown] and an R markdown script file with all the code (also knitted to PDF with results for convenience).

Next to the course requirements my goal was to explore using AutoML with H2O in R.

## Introduction

dataset goal methods results

## Analysis

### Data preparation

### Data exploration

visualization, any insights gained

### Modeling

approach and results

## Conclusion
